in Japan**

**Vol. 16
Cases treated in 1990**

Japanese Society for Cancer of the Colon and Rectum

Preface

This is the sixteenth issue of the Multi-Institutional Registry of Large Bowel Cancer in Japan. The registry started in 1980 as a task of the Japanese Society for Cancer of the Colon and Rectum (JSCCR).

In this series, of a total of 5,849 patients on file in 121 member institutes of JSCCR, 5,760 were found to have undergone initial treatment for histologically confirmed malignant neoplasms during the period from January 1 to December 31, 1990, and were available for analysis. All contents and items reported herein are identical to those of the previously published issues (i.e. from Vol. 1 through Vol. 15 except Vol. 5, Vol. 10 and Vol. 12) .

This work was supported in part by a Grant-in-Aid for cancer research from the Ministry of Health and Welfare of Japan.

Minimum requirements for "curative resection" are as follows:

- 1) No metastasis in the liver, peritoneum or extra-abdominal organs.
- 2) No cancerous infiltration in the surgical margin of the resected specimen.

When the minimum requirements for curative resection are not met, the operation is classified as "non-curative resection."

"Absolute" and "relative" categories are determined by the extent of lymph node dissection and assessment of the lymph node metastasis.

Refer to the general rules of "JRSCCR" for the details on terminology and classification used in this report.
