

**Multi-Institutional Registry of Large Bowel Cancer
in Japan**

Vol. 23
Cases treated in 1994

Japanese Society for Cancer of the Colon and Rectum

Members of the Registry Committee,
Japanese Society for Cancer of the Colon and Rectum

Honjo, Satoshi	Tochigi
Kato, Tomoyuki	Nagoya
Kodaira, Susumu	Tokyo
Kotake, Kenjiro*	Tochigi
Koyama, Yasuo	Tochigi
Moriya, Yoshihiro	Tokyo
Muto, Tetsuichiro†	Tokyo
Sugihara, Kenichi	Tokyo
Takahashi, Takashi	Tokyo
Yasutomi, Masayuki	Osaka

* Chairman of the Registry Committee.

† President of the Japanese Society for Cancer of the Colon and Rectum.

This report was prepared by

Kotake, K., Honjo, S. and Koyama, Y.

Preface

This booklet, the 23rd annual report, provides summary data relating to the prognosis of patients with large bowel cancer treated at 85 hospitals in 1994. In that year, 7,563 cases were prospectively registered at 122 institutions, and clinical and pathological characteristics of those cases were already presented in detail in the 12th report in 1996. The present survival analysis is based on 5,135 cases (68% of the prospective registrations), because 37 hospitals participated in the original registration but failed to respond to our follow-up inquiry. Some clinical and pathological findings of the present cases are reproduced in the first part of this booklet for the convenience of the readers.

This report is intended to help and stimulate patient care and research. The size of patients and the history since 1985 of this report is recognizable. However, figures in the report are based on some selected patients in Japan and follow-up rate remains to be improved substantially. It would be strongly desired for larger number of member hospitals to take part in the registration and follow-up. Only such collaboration could increase the value of subsequent reports in the series.

Acknowledgement

The Registry Committee is grateful to the many doctors who provided information on which this report is based. This work was supported in part by a Grant-in-Aid, No. 9-1, for Cancer Research from the Ministry of Health, Welfare and Labour of Japan.

June 2002

Tetsuichiro Muto, M.D.
Kenjiro Kotake, M.D.

Total		5,274	5,135	3,105	2,030

Cases with the following items omitted were excluded from analysis.

- 1) Histological features.
- 2) Date of birth.
- 3) Date of treatment.
- 4) Sex.
- 5) Location of tumor.

Names of institutes and/or departments are the same as those used in Vol.12 although some have actually changed their names since 1996 under structural reorganization mostly in universities and medical collages.

Abbreviation

GI: Gastrointestinal, GE: Gastroenterological, Gen: General, IM: Internal Medicine, Surg: Surgery

2 Patients analyzed

2-1 Histological type, site and sex

Histological type	Site	Total No.	Sex	
			Male	Female
Adenocarcinoma ^{a)}	Colon	3,012	1,767	1,245
	Rectum	2,052	1,302	750
Other malignancies ^{b)}	Colon	26	12	14
	Rectum	45	24	21
Total		5,135	3,015	2,030

a): well-, moderately and poorly differentiated adenocarcinoma, mucinous carcinoma and signet ring cell carcinoma.

b): carcinomas other than adenocarcinoma and non-epithelial malignant neoplasms.

2-2 Histological type, site and surgical treatment

Histological type	Site	Surgery ^{a)}			Total
		Yes	No		
Adenocarcinoma	Colon	3,006	[159] ^{b)}	6	3,012

Minimum requirements for "curative resection" are as follows:

- 1) No metastasis in the liver, peritoneum or extra-abdominal organs.
- 2) No cancerous infiltration in the surgical margin of the resected specimen.

When the minimum requirements for curative resection are not met, the operation is classified as "non-curative resection." "Absolute" and "relative" categories are determined by the extent of lymph node dissection and assessment of the lymph node metastasis.

Refer to the general rules of "JRSCCR" for the details on terminology and classification used in this report.

(See footnote to Table 5)

P0: No evidence of peritoneal dissemination. P1: Slight dissemination in the peritoneum adjacent to the primary lesion. (It seemed to be resectable.) P2: Scattered dissemination in the peritoneum remote from the primary lesion.

Dissemination limited to the major omentum or to the ovary is classified as P2. P3: Marked dissemination in the remote peritoneum.

M: Carcinoma is limited to within the mucosa.

SM: Carcinoma is limited to within the mucosa and submucosa.

PM: Carcinoma is limited to within the mucosa, submucosa and proper muscle.

SS: Carcinoma extends from the mucosa beyond the proper muscle but is not exposed on the serosal surface.

S: Carcinoma is exposed on the serosal surface.

Si: Carcinoma definitely infiltrates other organs.

At the site without serosa

A1: Carcinoma extends beyond the proper muscle but does not penetrate deeper.

A2: Carcinoma extends beyond the proper muscle infiltrating deeper but without infiltrating other organs.

Ai: Carcinoma definitely infiltrates other organs.
