Preface

This is the nineteenth report of the 'Multi-institutional Registry of Large Bowel Cancer in Japan' and contains follow-up information on patients treated in the year 1991. In Vol.10, clinical and pathological information on 6141 patients in 117 member institutes treated in 1991 were analyzed. In this issue, follow-up information on a total of 4760 patients was analyzed, because 29 institutes did not respond to our queries. All topics and item headings reported herein are identical to those in previously published reports (i.e. from Vol.1 through Vol.16, except for Vol.5, Vol.10 and Vol.12).

We hope that this report will be used extensively in daily clinical activities and studies on colorectal cancer. Our committee welcomes comments from readers.

This work was supported in part by a Grant-in-Aid for Cancer Research from the Ministry of Health and Welfare of Japan.

September 2000

Minimum requirements for "curative resection" are as follows:

- 1) No metastasis in the liver, peritoneum or extra-abdominal organs.
- 2) No cancerous infiltration in the surgical margin of the resected specimen.

When the minimum requirements for curative resection are not met, the operation is classified as "non-curative resection."

"Absolute" and "relative" categories are determined by the extent of lymph node dissection and assessment of the lymph node metastasis.

Refer to the general rules of "JRSCCR" for the details on terminology and classification used in this report.
